Pick the Right AI Model
for Each Step

not one model for everything

Haiku
simple + fast

Sonnet
my default

Opus
only when needed

Swipe →

Step 1

List the Steps

One workflow does **different jobs**. Each job can use a different model.

🏷️ **Tag the message**
price, order, complaint, spam

🔍 **Look up the order**
no AI needed

✍️ **Write the reply**
tone + facts

🧩 **Messy complaint**
3 orders, 2 refunds, 1 angry customer

Step 2

Start in the Middle

Build every AI step on a **mid model** first. Get it working.

Anthropic Chat Model

Credential

🔑 Anthropic account ▼

Model

Claude Sonnet ▼

Max tokens

1024 ▼

✓ Good at reading, writing and using tools

my default for most agents

Step 3

Test on Real Examples

Run the **same real messages** through two models.
Compare side by side.

Google Sheets

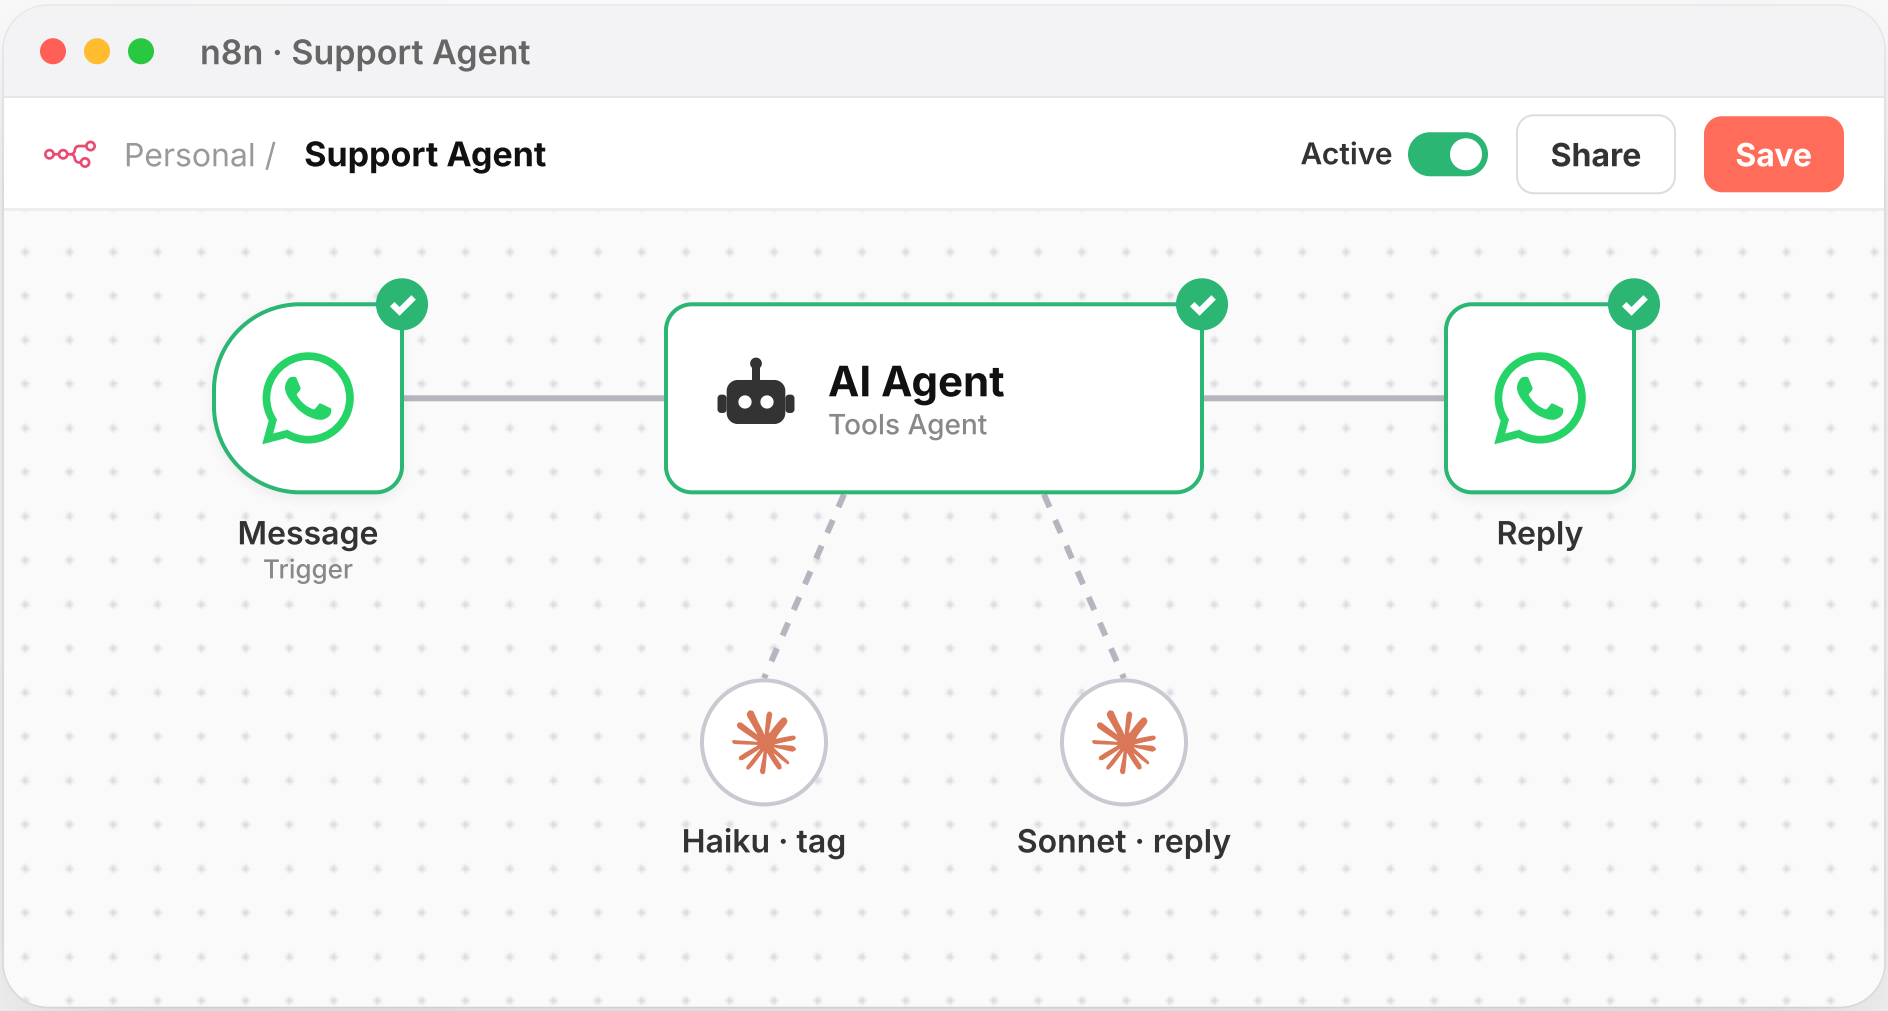

Model test · tagging

Real message	Sonnet	Haiku
"Price for 2 kg?"	price ✓	price ✓
"Where's ORD-1044"	order ✓	order ✓
"3rd late order!!"	complaint ✓	complaint ✓
"hi"	other ✓	other ✓
"Refund + new order?"	complaint ✓	order ×

your data beats any benchmark

Step 4

Go Down for Easy Steps

simple job = small, fast, cheaper model

Step 5

Go Up Only When It Fails

Claude

Complaint with 3 orders, 2 refund requests and an address change. Summarise what the customer needs.

Sonnet missed one refund in this long thread.
→ **Switch only this step to Opus.**

Tagging stays on Haiku. Replies stay on Sonnet.

Start in the middle. Go **down** if easy.
Go **up** only where it fails.

upgrade the step, not the whole flow

Using one AI model for everything?
