Step 1

Watch Gmail for Invoices

A **Gmail Trigger** picks up every email with a PDF invoice attached.

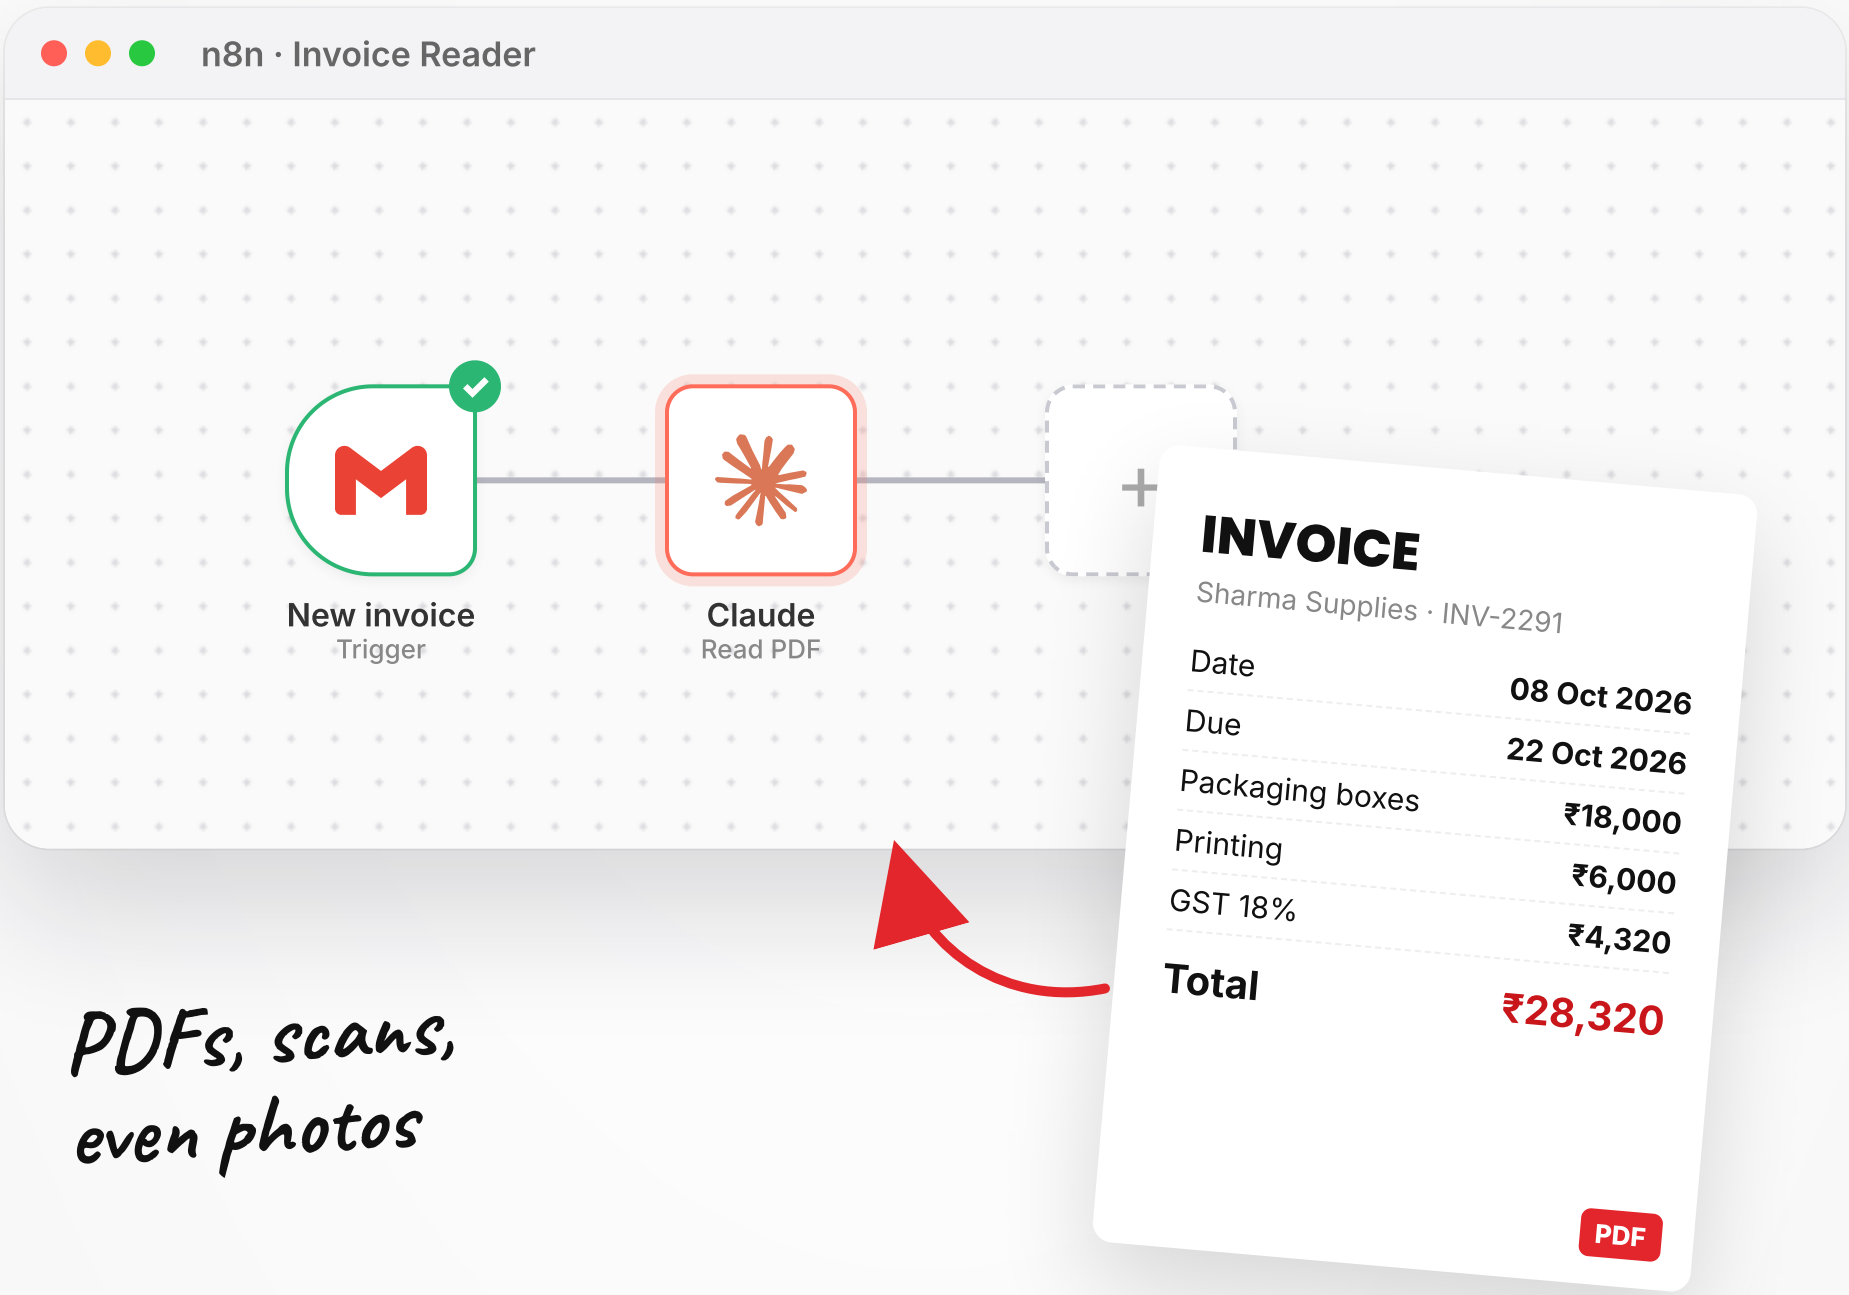

filter = fewer false runs

Step 2

Send the PDF to Claude

Add an **Anthropic** node and pass the attachment.
Claude reads the whole document.

PDFs, scans, even photos

Step 3

Ask for Clean JSON

Tell Claude exactly which fields you want, and to say **null** instead of guessing.

System Message

Claude › Prompt

Expression

```
Read this invoice. Return JSON only:
vendor, invoice_no, date, due_date,
line_items[], gst, total, gstin

If a field is missing, use null. Never guess.

// output
{ "vendor": "Sharma Supplies", "invoice_no": "INV-2291",
  "due_date": "2026-10-22", "gst": 4320,
  "total": 28320 }
```

null beats a guess

Step 4

Check the Maths

AI is very good. Accounts need **exact**. Simple rule checks catch the rare miss.

AI + boring checks

Code node · checks — 1 needs review

- ✓ Line items + GST = total
- ✓ GSTIN is 15 characters
- ✓ Due date is after invoice date
- ! INV-2291 already exists → **duplicate?**

Pass → saved automatically
Fail → sent to you for a quick look

Step 5

Save to Sheets + Drive

One clean row per invoice, and the PDF filed in the **right folder**.

Each PDF saved and renamed: `2026-10-08_Sharma_INV-2291.pdf`

Step 6

Get Alerts That Matter

Payments coming due and anything that **failed a check**.
Nothing else.
